

Should You Ever Fear A Virus?

The authors of Virus Mania, show that...

“These alleged contagious viruses are, in fact, particles produced by the cells themselves as a consequence of certain stress factors such as drugs.”

“These particles are then identified by antibody and PCR tests and interpreted as epidemic-causing viruses by doctors who have been inoculated for over 100 years by the theory [i.e. Germ Theory] that microbes are deadly and only modern medications and vaccines will protect us from virus pandemics.”¹

Claus Köhnlein is a medical specialist of internal diseases. He completed his residency in the Oncology Department at the University of Kiel. Since 1993, he has worked in his own medical practice, treating Hepatitis C and AIDS patients who are skeptical of antiviral medications.

Torsten Engelbrecht is a freelance journalist in Hamburg. He has written articles for publications such as *Medical Hypotheses*, *British Medical Journal* (online), From 2000 to 2004, he worked as business editor of the *Financial Times Deutschland*.

“We are not witnessing viral epidemics; we are witnessing epidemics of fear.”²
