

Whilst you were distracted by Boris resigning, the UK Gov. quietly published a report confirming the Vaccinated account for 94% of all COVID-19 Deaths since April, 90% of which were Triple/Quadruple Jabbed

 expose-news.com/2022/07/11/boris-distraction-uk-gov-revealed-triple-vaccinated-94percent-covid-deaths/

By The Exposé

July 11, 2022

A report that was quietly published by the UK Government, just hours before Prime Minister Boris Johnson announced his resignation, reveals that Covid-19 deaths have risen dramatically among the triple vaccinated population in England over the past couple of months whilst declining drastically among the unvaccinated population.

With the most recent figures showing the vaccinated population in England accounted for a shocking 94% of all Covid-19 Deaths in April and May, and 90% of those deaths were among the triple/quadruple vaccinated population.

On the 7th July, Boris Johnson, the Prime Minister of the United Kingdom, announced he was resigning. Since then the Mainstream Media in the UK have distracted the public with 24/7 news on that announcement and speculation on who could replace him.

It's times like these that you ought to watch what bad news is being quietly published in the background in the hope that it won't receive much attention, and it just so happens that hours before Boris announced his resignation, his Government published new data that proves things have been terrible for the vaccinated population in England over the past couple of months.

Back in March 2022, the UK Health Security Agency announced that from April 1st 2022, they would no longer publish the vaccination status of Covid-19 cases, hospitalisations and deaths in England.

At the time, the UKHSA claimed this was because the UK Government had ended free universal Covid-19 testing and this therefore affected their “ability to robustly monitor Covid-19 cases by vaccination status”.

However, this was a lie.

The UK Health Security Agency had been looking for an excuse for months to stop publishing the data because it clearly showed the vaccinated population were suffering immense immune system damage, with case, hospitalisation, and death rates per 100,000 highest among the fully vaccinated population.

The following chart shows the real world Covid-19 vaccine effectiveness among the triple vaccinated population in England in the Week 3, Week 7 and Week 13 UKHSA Vaccine Surveillance reports of 2022 –

Source

This was nowhere near the claimed 95% effectiveness by Pfizer was it?

But now we have more evidence to both prove the UKHSA was lying, and that the current mainstream media storm surrounding the resignation of Boris Johnson is just a distraction.

This is because another UK Government agency, known as the Office for National Statistics (ONS), has just published data on deaths by vaccination status.

The latest dataset from the ONS is titled '*Deaths by Vaccination Status, England, 1 January 2021 to 31 May 2022*', and it can be accessed on the ONS site [here](#), and downloaded [here](#).

All data relating to 'Age-standardised mortality rates for deaths by vaccination status, England: deaths occurring between 1 January 2021 and 31 May 2022: 6 July 2022'
Age-standardised mortality rates for deaths by vaccination status, England: deaths occurring between 1 January 2021 and 31 May 2022
Publication date: 6 July 2022

Table 1 of the latest dataet contains figures on the mortality rates by vaccination status for all cause deaths, deaths involving Covid-19, and deaths not involving Covid-19. And it is here that we are able to ascertain the vaccination status of everyone who has died of Covid-19 since the beginning of April 2022, when the UKHSA claimed they could no longer reliably report the figures.

Here's how the ONS presents the figures for the month of April 2022 –

Cause of Death	Year	Month	Vaccination status	Count of deaths
Deaths involving COVID-19	2022	April	Unvaccinated	206
Deaths involving COVID-19	2022	April	First dose, less than 21 days ago	1
Deaths involving COVID-19	2022	April	First dose, at least 21 days ago	45
Deaths involving COVID-19	2022	April	Second dose, less than 21 days ago	0
Deaths involving COVID-19	2022	April	Second dose, between 21 days and 6 months ago	13
Deaths involving COVID-19	2022	April	Second dose, at least 6 months ago	246
Deaths involving COVID-19	2022	April	Third dose or booster, less than 21 days ago	3
Deaths involving COVID-19	2022	April	Third dose or booster, at least 21 days ago	3057
Deaths involving COVID-19	2022	April	Ever vaccinated	3365

Source – Table 1

We've taken the figures provided by the ONS for both April and May 2022, and produced the following chart showing Covid-19 deaths by vaccination status in England between 1st April and 31st May 2022 –

Source Data

In all, according to the ONS, there were 4,935 Covid-19 deaths over these two months, and the vaccinated population accounted for a shocking 4,647 of those deaths. But what's even more shocking is that the triple vaccinated accounted for 4,216 of those deaths, with just 288 deaths recorded among the unvaccinated population.

In March 2022, there were 321 Covid-19 deaths within 60 days of a positive test among the unvaccinated population according to the UKHSA Week 13 Vaccine Surveillance Report, as detailed in the following chart using data extracted from table 13b of the report –

Source Data

This means there were 33 less deaths among the unvaccinated over two months (April and May) than there were in the whole of March.

Unfortunately, the opposite is true for the vaccinated population, especially the triple vaccinated. There were 911 more deaths among the vaccinated over two months, and 1,161 more death among the triple vaccinated.

This means deaths have fallen drastically among the unvaccinated but increased significantly among the vaccinated population since the UKHSA claimed they could no longer reliably publish the data.

The following chart shows the percentage of Covid-19 deaths by vaccination status in England between 1st April and 31st May 2022, according to the latest ONS dataset published just hours before Boris Johnson's resignation –

Source Data

The quietly published figures reveal that the vaccinated population as a whole accounted for a shocking 94% of all Covid-19 deaths in April and May 2022, with the unvaccinated accounting for just 6% of all Covid-19 deaths. But the most horrific statistic here is that 90% of the deaths among the vaccinated were among people who had been given at least three doses of a Covid-19 injection.

However, many in the UK have been given a fourth dose of a Covid-19 injection since the spring, and judging by the latest data from the Government of Canada, it's likely many of those deaths could actually be among the quadruple vaccinated.

Source Data

The most recent Government of Canada figures show that there were 521 Covid-19 deaths between 6th and 12th June, and the vaccinated population accounted for 485 of them, with a shocking 242 deaths among the quadruple vaccinated population, meaning they accounted for 50% of Covid-19 deaths among the vaccinated in the second week of June 2022.

These aren't the kind of figures you would expect to see if the Covid-19 injections really are up to 95% effective at preventing death, are they?

So there you have it, whilst you've been distracted by Boris Johnson's resignation as Prime Minister of the United Kingdom, the UK Government quietly published a report just hours before his announcement containing data they previously claimed they didn't have, which confirmed the vaccinated now account for 94% of Covid-19 deaths in England, and 90% of those deaths are among the triple vaccinated.

With news like this being swept under the rug by the mainstream media, it makes you wonder what else they will attempt to hide in the coming weeks?
